Computer Science

Computer science is a professional discipline concerned with everything to do with computers and our relationship with them.

Computers are critical to the efficient running of modern societies, dealing with health, security, banking and finance, transportation, and now increasingly our interaction through social networks. Computing professionals, like their counterparts in medicine, law, engineering, accountancy and finance, deal with theoretical issues, solve complex problems, deal with matters of ethics and with society at large.

Computer Science at Trinity

Trinity Computer Science students study for an honours Bachelor’s degree over four years and have the option to study for a fifth year leading to a Master in Computer Science (MCS) degree.

A core component of the MCS is an industry/research internship.

As a Trinity Computer Science graduate you will be able to work at the highest level in the global technology industry. You will develop entrepreneurial skills to enable you to build new products and solutions, making decisions that will affect all our futures.

Graduates find employment in many sectors from communications and entertainment to manufacturing and transportation, government, healthcare, education and many more.

Our Approach

Our approach is to teach you the theory and practice of computer systems, exposing you to the whole range of computing technology from hardware to software, from telecoms to social networking.

About the Programme

The choice to study over four years for a Bachelor’s degree (BA Mod in Computer Science) or over five years for a Master’s degree (MCS) is made at the end of the third year of the programme.

If you opt for the Bachelor’s degree, you will undertake a Final Year Project in your fourth year and you will begin specialisation in areas of interest.

If you opt for the Master’s degree you will undertake an internship in your fourth year and you will also begin your specialisation in areas of interest. In your final year, you will deepen your specialisation and you will also undertake a substantial research dissertation. Students graduating from the MCS will also graduate with the BA (Mod) in Computer Science.
Careers

“I am just finishing my fourth year of five, pursuing a Master’s Degree in Computer Science. I am currently completing my last few weeks as a Software Engineer Intern with MasterCard. I enjoy problem solving, creativity, innovation, and working with cutting edge technology. I believe your job should be rewarding, and a constant source of learning. I am striving for a career that compels and enthuses me every day. Technology is an industry that is always evolving, and encourages new ideas and fresh thinking. Computer Science at Trinity is a natural step on this career path.

The course builds strong skills in all the fundamentals required for a Computer Scientist, such as programming, algorithms, architecture etc. It also gives huge opportunity for students to find their niche, with a great variety of module options to choose from, computer vision, graphics, database design, artificial intelligence, and many more.

The internship option is invaluable experience. Employers are keen to take students from Trinity Computer Science and turn these interns into graduate hires.”

Tara Matthews

“I wanted to pursue a career as a professional software developer and felt that Computer Science in Trinity was the perfect course to kick-start my career in computing. I recently graduated from the new five year Master in Computer Science (MCS) course and within three weeks of finishing, I took up the role of Software Developer at SAP.

The course itself is very engaging and full of variety. Each module of the course is challenging and provides the right level of experience and knowledge that students need to succeed in a computing career, whether they aim to work in the games industry, networking, software or hardware development. I focused on elements of web technologies and network design, but each student is given the opportunity to specialise in their own area of interest.

I think that the internship option in the fourth year of the course is extremely valuable. I worked in the Citi Innovation Lab where I was engrossed in the latest technology, design methodologies and innovative thinking that is driving the future of software development today. The experience looks great on your CV and definitely helped when applying for my current role. You also get the opportunity to meet a lot of people in the industry and make valuable networking connections.

Overall, the MCS has fully lived up to my expectations and I would highly recommend it to any future students.”

Conor McEvoy, MCS Computer Science graduate

“I always enjoyed problem solving and discovering how things worked on the computer. Following some transition year work experience in the IT industry and at Trinity I knew I wanted to study computer science. What I really liked about the course was the exposure to software, hardware and telecommunications which allowed the courses to piece together to see the entire view of a system rather than as separate components. I found the lecturers to be knowledgeable and approachable. We were also required to take part in many group activities which developed our communication and teamworking skills which in turn prepared us well for the workplace environment. Being a male dominated science, I think we need more girls to think seriously about studying computer science at college.

During my summers at Trinity, I undertook a number of internships both in Ireland and abroad. One of these internships resulted in a full time graduate job offer in London.

Katharine Burton, BA (Mod) Computer Science graduate

---

Each year the School invites leading employers in the sector to attend a special recruitment fair at which students can chat informally regarding many career opportunities.
Internship

Fourth-year students who opt for the master’s degree undertake a seven-month internship in industry or in a research laboratory. The aim is to develop your understanding of how design and theoretical aspects of computer science are applied in a commercial or research workplace. Many companies find that hosting an intern provides the opportunity to focus on special projects.

Frequently asked questions

How much do I need to know about computers to do Computer Science?

No prior knowledge of computers is required. An interest in solving problems is essential.

What programming languages do you use?

Computer professionals need to be comfortable with lots of languages. We currently teach Java, C/C++ and Haskell and we use many others. We teach ARM assembly language and VHDL for courses in computer architecture and hardware design. Students can avail of individual advice and help from our Programming Centre.

How many hours of lectures, labs and tutorials will I have each week?

You could expect to have approximately twenty contact hours per week. In the first year you will have about fifteen hours of lectures and four hours of labs each week. You will need to spend additional time studying, working on coursework projects and assignments, in teams and on your own.

Can you describe first year for me?

In first year you will study programming, mathematics, computer hardware, electronics and telecommunications. In addition you will take part in a team-based programming project and explore relationships between computers and the wider society.

What supports will I have over the course of my studies?

All college supports are open to every student and include our unique tutoring system, health service, student counselling service, disability services, careers advisory service, and many more.

Do I need to be really good at maths?

You don’t need to be a genius at maths but you need to be comfortable using mathematical techniques to solve problems.
## BA (Mod) in Computer Science/Master in Computer Science (MCS)

### First Year
- Mathematics
- Computer Programming
- Team Programming Project
- Microprocessor Systems
- Digital Logic
- Electronics
- Telecommunications
- Computers and Society

### Second Year
- Mathematics
- Computer Programming
- Team Programming Project
- Microprocessor Systems
- Concurrency & Operating Systems
- Information Management
- Telecommunications
- Choice of Broad Curriculum Module
  (www.tcd.ie/Broad_Curriculum)

### Third Year
- Mathematics
- Symbolic Computation
- Team Programming Project
- Microprocessor Systems
- Software Engineering
- Information Management
- Advanced Telecommunications
- Artificial Intelligence

### Fourth Year (BA (Mod) Computer Science)
- Human Factors
- Technology Entrepreneurship
- Group Project
- Individual Project
- Four of the following:

### Fourth Year (Master in Computer Science)
- Human Factors
- Technology Entrepreneurship
- Industrial or Research Lab Internship
- Four of the following:

### Fifth Year (Master in Computer Science)
- Research Methods
- Four of the following options:
- MCS Dissertation

---

1. The range of options offered each year is subject to change.
2. There are some restrictions on the modules that may be combined and the same module may only be taken once in Fourth Year or Fifth Year.

These courses are co-funded by the Irish Government and the European Union under the European Social Fund.
