Planning for the use of ICT in Second Level Education for a Vocational School

Abstract

The aims of the project were to:

1. Investigate best practice in the use of ICT’s in second level education.
2. Establish a clear picture of the current use of the technologies in the client school.
3. Combine 1 and 2 to produce a high-level school plan for the educational use of ICT’s in the client school.

The project was a success, with a vision for the use of ICT’s in education in the school established. Challenges to achieving this vision and a framework to proceed with ICT planning have been identified, along with a number of well-founded short-term recommendations.
